Avalim

Avalim F1

Avalim is a 100% male hybrid and highly suitable for production of white and green asparagus in a temperate climate. Avalim combines very early production with good spear thickness and quality. Avalim is very suitable for forced early cultivation.

Cultivation Avalim grows best on fertile, well-drained soils. Our own extensive research has shown that the best results for white asparagus are achieved with a planting density of 3 - 4 plants per m¹ with a planting depth of 18 - 20 cm. This plant density can be increased by approximately 30% if the asparagus is harvested green. Thanks to its natural earliness, Avalim is ideally suited to extra forcing techniques, such as thermic plastic mulch and mini tunnels. Avalim performs well under various types of plastic mulch.

Product Avalim has a good production potential, excellent quality and stems of a good thickness. It has creamy white stems, a very good closed tip and little or no susceptibility to hollow stems and physiological rust. Three quarters of production is in grade 18 - 28 mm. Avalim has a particularly good flavour.

Foliage Avalim's very uniform foliage is dark green, erect and vigorous. The foliage has a natural tolerance to foliage diseases and stays green until late in the autumn. These good foliage traits also make Avalim ideal for organic cultivation methods.

Table of variety traits of the Limseeds assortment.

	Relative yield ¹	Diameter ¹	Earliness ¹	Climate ²	White/green ³
Avalim	100	7	9	Temperate	White / green
Backlim	100	8	6	Temperate	White / green
Gijnlim	115	6	9	Temperate	White / green
Grolim	105	9	8	Temperate / warm	White
Herkolim	105	9	7	Temperate	White
Horlim	100	8	7	Temperate	White
Thielim	105	8	8	Temperate	White

¹ The higher the score, the more positive the trait rates.

² Temperate = the climate compared to North West Europe; Warm = the climate compared to South Europe.

³ Suitable for cultivation of white and/or green asparagus
