

Backlim

Backlim

- Suitable for white and green
- Strong quality and production
- Excellent follow up to forced cultivation
- A good choice for replanting
- The standard in heated production

Backlim

Backlim F1

Backlim is a 100% male hybrid and highly suitable for production of white asparagus in a temperate climate. Backlim also performs well in green asparagus production. This variety is also extremely well suited for harvesting in the 2nd half of the season, combined with the harvest of early varieties such as Avalim and Gijnlim. Backlim has evolved into the standard variety in greenhouse growing. Backlim gives reliable yields and quality, both in greenhouses and when field grown.

Cultivation Backlim is a variety that performs well on all types of well-drained soils. Years of practical experience have shown that Backlim performs best with a planting density of 3.5 - 4.5 plants per m¹. The recommended planting density for green asparagus is 4 - 5 plants per m¹. The recommended planting depth under normal conditions is 18 - 22 cm, planting any deeper means harvesting will start later. Backlim produces well on soils previously used to grow asparagus. Backlim also grows well under plastic sheeting.

Product Backlim produces fine, straight stems. The quality increases as the plant ages. Backlim produces asparagus with a firm tip and high resistance to hollowness, pink discolouration and physiological rust. A good half of the production is class 20 - 28 mm. Backlim is a variety with very good flavour properties.

Foliage Backlim's compact foliage, despite dying off naturally early in the autumn, ensures that a good store of reserves is built up for the plant.

Table of variety traits of the Limseeds assortment.

	Relative yield ¹	Diameter ¹	Earliness ¹	Climate ²	White/green ³
Avalim	100	7	9	Temperate	White / green
Backlim	100	8	6	Temperate	White / green
Gijnlim	115	6	9	Temperate	White / green
Grolim	105	9	8	Temperate / warm	White
Herkolim	105	9	7	Temperate	White
Horlim	100	8	7	Temperate	White
Thielim	105	8	8	Temperate	White

¹ The higher the score, the more positive the trait rates.

² Temperate = the climate compared to North West Europe; Warm = the climate compared to South Europe.

³ Suitable for cultivation of white and/or green asparagus
